Attached is a revised version of the CSM. Please use this for filling in your pathways indicators.

Note there are three worksheets.

1) The first is the revised CSM. The left side is now absent the "Riparian" media. The "Seeps" and "Sediment (<MHW)" media capture riparian, as we agreed. I believe this is correct, but I saved the older version just in case. Also, the reptile receptor has been removed based on the agreement that remedies protective of birds and/or amphibians would be protective of reptiles.

2) The second sheet includes definitions, which have not been revised yet.

*3) The third sheet, "Pathways", is where you provide your input.

*Also please note the tribes have requested the addition of Adult lamprey/parasites and Wapato as receptors. I have not added those here pending discussion with the group, but I wanted everyone to be aware of the request.

*PLEASE FILL IN THE 3rd WORKSHEET AND RETURN TO ME ASAP (NO LATER THAN TOMORROW AFTERNOON IF POSSIBLE).

*Thanks,

-R
